Monthly report: October 2026

BTC-1, the record of reout.

Every figure is taken from the record's data files, listed with their hashes in part 8, and is a return or a ratio relative to net asset value; no currency amount is published. The descriptions of changes, incidents, review findings and reconciliation differences are written by reout at the time, in the registers they are quoted from (Methodology, section 5).

Index at the last valuation point of each month since record inception:

Month	Last valuation point	Index	Index, 1×
2026-10	2026-10-31	95.14	98.68

2. Risk

	Month	Since record inception
Annualized volatility	62.36%	62.36%
Worst day	−7.29%	−7.29%
Best day	+11.50%	+11.50%
Maximum drawdown	−21.13%	−21.13%
Maximum drawdown, derived 1×	–	−7.47%
Current drawdown	–	−9.51%
Days underwater	–	27
Sharpe ratio	–	not reported until the record spans twelve full months

Drawdowns are measured on the index at daily valuation points and are a lower bound; the current drawdown and the days underwater are those at 2026-10-31.

3. Benchmark

7. Reconciliation, changes and incidents

Reconciliation

The reconciliation of 2026-10 was not complete when this report was published. Its outcome is given in the next report.

Changes

- METHODOLOGY.md: Sections 2 and 3: each external cash flow is valued at its time and splits its valuation interval, from the interval ending 2026-10-22. That interval, first published with its flows treated as occurring at the start of the interval, is corrected in the log of corrections, the published values retained. Rationale: a flow treated as occurring at the start of the interval takes the whole interval's result as earned on the capital after the flow. On 2026-10-22, 84.6% of NAV was withdrawn after most of the day's loss had been incurred on the whole account, and the daily return was published as −27.65% (2026-10-25).

Incidents

As entered in the incident log:

Start (UTC)	End (UTC)	Kind	What happened	Effect on the record	Remedy

Start (UTC)	End (UTC)	Kind	What happened	Effect on the record	Remedy
2026-10-01 23:59:59	2026-10-09 10:11:24	Defect	Software defect, present from before record inception: part of the live program's entry selection did not apply part of its tested specification.	More entries were taken than under the tested specification. With the defect in the next row, a reconstruction of 2026-09-28 to 2026-10-21 gives 16 trades under the specification against the 54 taken. Recorded P&L is as traded.	Corrected and deployed 2026-10-09 10:11:24.
2026-10-01 23:59:59	2026-10-25 05:49:31	Defect	Software defect, present from before record inception: in the same part of the live program, a setting differed from its tested specification. Exits of the account's positions were not affected.	As in the previous row. Alone, the reconstruction gives 19 trades against 16. Recorded P&L is as traded.	Corrected and deployed 2026-10-25 05:49:31; a check against the specification was added to the pre-deployment tests.
2026-10-22 07:53:08	2026-10-22 08:04:03	Manual action	The program was restarted with its capital set to a fixed amount below the account's wallet, to reduce the size of new positions, and restarted again with its capital taken from the wallet, as specified.	No position was opened while the setting was in effect.	Reverted 2026-10-22 08:04:03. Entered in the intervention log.

Manual actions, as entered in the intervention log:

Timestamp (UTC)	Account	Action	Reason	Effect
2026-10-22 07:53:08	1	Program restarted with its capital set to a fixed amount instead of the account's wallet; reverted at 08:04:03	To reduce the size of new positions	No position opened or closed while in effect
